Triangle Congruence

Congruent Triangles: Two triangles are congruent if their parts can be paired so that the corresponding sides and the corresponding angles are congruent.

CPCTC: The Corresponding Parts of Congruent Triangles are Congruent

Properties of Congruence

- 1. Reflexive Property: $\triangle ABC \cong \triangle ABC$
- 2. Symmetric Property: If $\triangle ABC \cong \triangle XYZ$, then $\triangle XYZ \cong \triangle ABC$.
- 3. Transitive Property: If $\triangle ABC \cong \triangle DEF$ and $\triangle DEF \cong \triangle XYZ$, then $\triangle ABC \cong \triangle XYZ$.

Practice Exercises

A. Name the corresponding sides and angles of the following triangles.

- 1. $\triangle RMP \cong \triangle GIN$
- 2. \triangle YEA \cong \triangle KCF

B. Identify whether the following are **True** or **False** if $\triangle KHA \cong \triangle REN$.

- 1. $\triangle KAH \cong \triangle RNE$
- 4. $\triangle HAK \cong \triangle ENR$
- 2. $\triangle AHK \cong \triangle ERN$
- 3. $\triangle AKH \cong \triangle NRE$
- 5. $\triangle KHA \cong \triangle RNE$

Problem Set

- A. Name the corresponding sides and angles of the following triangles.
 - 1. $\triangle ABC \cong \triangle HIJ$
 - 2. $\triangle JKL \cong \triangle XYZ$
- B. Identify whether the following are **True** or **False** if $\triangle DAR \cong \triangle WIN$.
 - 1. $\triangle DRA \cong \triangle WNI$
- 4. $\triangle ADR \cong \triangle IWN$
- 2. $\triangle ARD \cong \triangle NWI$
- 3. $\triangle RAD \cong \triangle NIW$
- 5. $\triangle RDA \cong \triangle NIW$

Triangle Congruence

Congruent Triangles: Two triangles are congruent if their parts can be paired so that the corresponding sides and the corresponding angles are congruent.

 $\ensuremath{\mathsf{CPCTC}}\xspace$ The Corresponding Parts of Congruent Triangles are Congruent

Properties of Congruence

- 1. Reflexive Property: $\triangle ABC \cong \triangle ABC$
- 2. Symmetric Property: If $\triangle ABC \cong \triangle XYZ$, then $\triangle XYZ \cong \triangle ABC$.
- 3. Transitive Property: If $\triangle ABC \cong \triangle DEF$ and $\triangle DEF \cong \triangle XYZ$, then $\triangle ABC \cong \triangle XYZ$.
